

The future of building is geothermal

Choose one of the most efficient heating and cooling technologies available

300–400%
more efficient than other fuel sources

An innovative path towards net zero

In today's competitive housing market, sustainability is the advantage that sets builders apart. Stay ahead of the curve with clean, renewable geothermal technology—the most efficient heating and cooling system on the market. We can help you provide a leading-edge, zero-carbon choice for energy-conscious homebuyers in your next development.

5

reasons builders invest:

Designed to last

Underground infrastructure can last well over 50 years.

Achieve 'Net Zero' status

Reduce environmental impact with zero carbon emissions.

Future proof

An innovative way to stay ahead as sustainability requirements evolve.

Long-term cost savings

More efficient than conventional heating systems.

Quiet and reliable

No noisy outdoor equipment, efficient even through extreme weather.

How does geothermal work?

Geothermal is a clean, renewable energy that leverages the consistent temperature of the earth just a few metres below ground.

Using a loop of underground pipes, the system exchanges heat with the ground and moves it to and from your home. This transfer of energy keeps homes warm in the winter, and cool in the summer.

We take care of every detail— even the cost

Our model makes it easy to integrate geothermal technology into your next development, and we work closely with your team at every step.

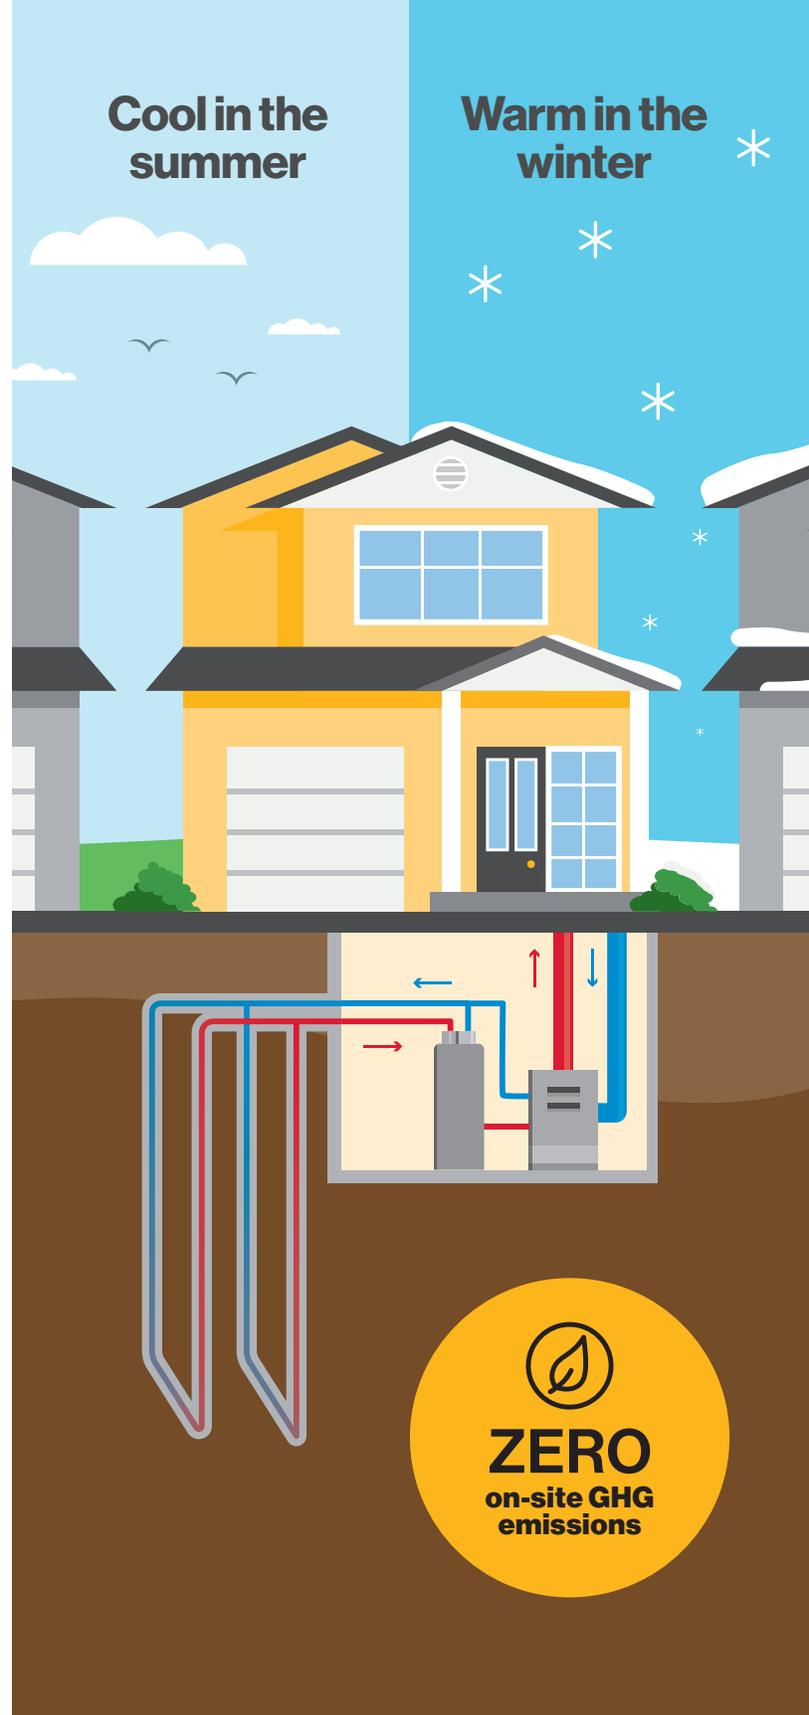

- ✔ **We install the geothermal loop**
Our contractor will drill and install the pipe network, at no cost to you.
- ✔ **Get access to contractors support**
Get access to geothermal experts to help your team install and commission the heat pump systems.
- ✔ **There's no cost to build the infrastructure**
Upfront costs are converted into affordable monthly payments for home buyers.
- ✔ **No maintenance or servicing required**
Our loop lease agreement includes all maintenance, which keeps this responsibility in our court.
